PROFILE

Final-year CSE student specializing in full-stack mobile development with Flutter and Kotlin, also experienced in web development, Machine Learning and Data Analysis. A collaborative, well-mannered team player looking to grow as a professional software developer.

SKILLS & EXPERTISE

Programming Languages

Flutter

Kotlin

Java

Python (Django)

PHP

C++

Tools & Other

Git / GitHub

ML & Data Analysis

Management

LANGUAGE

English

Burmese

Korean

STRENGTHS

- Team collaboration
- Well-mannered & professional

EDUCATION

Myanmar Institute of Information and Technology (MIIT)

- Major: Computer Science and Engineering
- Expected Graduation: 2026
- CGPA: 3.68 / 4.0

University of the People (UoPeople) — online

- Program: Business & Administration (in progress)
- CGPA: 3.77 / 4.0

COURSES

- Management and Marketing — Myanmar Institute of College (MIC)
- English 4 Skills — IH (International House)

PROJECT EXPERIENCE

Fitness Tracker *Web Application*

- Built a web-based fitness tracking application using Python Django with a MySQL database, allowing users to log workouts, track sets and reps, and visualize progress over time through simple charts and history views.

Social Media App *Mobile Application*

- Developed a social media mobile application using Flutter for the interface and Firebase (Authentication and Firestore) for the backend, supporting user sign-up, posts, likes, comments, and a real-time news feed.

Customer Churn Detection *Web Application*

- Built a web application that analyzes customer data to detect and predict customer churn, applying data analysis and machine learning techniques in Python and presenting results through an interactive dashboard for easy interpretation.

Burmese Word Segmentation *Web Application*

- Built a web application using Python to segment Burmese text into individual words, applying NLP techniques to handle a language with no natural word boundaries, and exposing the tool through a simple web interface for testing input text.

Personal Finance Planner with AI Advisor *Mobile Application*

- Created a mobile personal finance planning app in Kotlin, using Firebase (Authentication and Firestore) to securely store user income, expenses, and savings goals, with an AI-powered advisor feature that analyzes spending patterns to give users personalized budgeting guidance.
